

# **Finanzas SD - Testing Charter**

Finanzas SD - Architecture, Flows & SOPs

Arquitectura, Flujos y Procedimientos

January 11, 2026

## 1 Finanzas SD – Testing Charter

1. Every change that can affect behavior (API, DynamoDB, Lambda, UI data flow, calculations) **must**:
  - Have at least one **explicit test script** (CLI, Newman, Jest, Playwright, etc.).
  - Be executed against the **tester credential** defined in env (Cognito test user).
2. **No fabricated results**:
  - AI assistants (Copilot, GPT-5, Claude, etc.) are allowed to propose commands and test scripts, but **must not claim** they ran tests or that tests passed.
  - Any “passing results” recorded in docs (Evidence Pack) must be:
    - Copy-pasted from local terminal output, or
    - Copy-pasted from GitHub Actions logs.
  - Assistants must phrase results as “expected outcome” unless real logs are shown.
3. Evidence requirements:
  - For each module touched (Catalog, Forecast, Reconciliation, Changes, Hand-off, Projects list, etc.), there must be:
    - A tests/finanzas/<module>/run-<module>-tests.sh script, and
    - Corresponding entries in docs/EVIDENCE\_FINZ.md with command lines + selected output.
