

# **Finanzas Cognito Canonical Configuration**

Finanzas SD – Architecture, Flows & SOPs

Arquitectura, Flujos y Procedimientos

## 1 Finanzas Cognito Canonical Configuration

This configuration keeps the Finanzas (SDT) UI aligned with the working acta-ui setup and removes hard-coded Cognito identifiers from the code. Values are now driven entirely by environment variables.

### 1.1 Canonical Cognito values

- **User pool ID:** us-east-2\_FyHLt0hiY
- **App client ID:** dshos5iou44tuach7ta3ici5m (lkusi-acta-ui-web)
- **Domain:** us-east-2fyhltohiy.auth.us-east-2.amazoncognito.com
- **OAuth flow:** Implicit (response\_type=token), scopes: openid email profile aws.cognito.signin.user.admin
- **Allowed callback URLs:**
  - <https://d7t9x3j66yd8k.cloudfront.net/finanzas/>
  - <https://d7t9x3j66yd8k.cloudfront.net/finanzas/auth/callback.html>
- **Allowed logout URLs:**
  - <https://d7t9x3j66yd8k.cloudfront.net/finanzas/>
  - <https://d7t9x3j66yd8k.cloudfront.net/finanzas/login>

### 1.2 Required environment variables

Set these for every Finanzas build/deployment:

```
VITE_COGNITO_USER_POOL_ID=us-east-2_FyHLt0hiY
VITE_COGNITO_CLIENT_ID=dshos5iou44tuach7ta3ici5m
VITE_COGNITO_DOMAIN=us-east-2fyhltohiy.auth.us-east-2.amazoncognito.com
VITE_COGNITO_REDIRECT_SIGNIN=https://d7t9x3j66yd8k.cloudfront.net/finanzas/auth/callback.html
VITE_COGNITO_REDIRECT_SIGNOUT=https://d7t9x3j66yd8k.cloudfront.net/finanzas/logout
VITE_COGNITO_REGION=us-east-2
VITE_AWS_REGION=us-east-2
```

### 1.3 Alignment checks

- public/auth/callback.html ships in the build, so /finanzas/auth/callback.html remains available in S3/CloudFront.
- The SPA CloudFront function must **not** rewrite /finanzas/auth/callback.html; other extension-less /finanzas/\* paths should still route to /finanzas/index.html.
- Amazon Verified Permissions and any Cognito identity pools should reference the same user pool and client ID listed above.
